

## Container Shipment Delivery Information

Container shipments are reserved for projects located in areas that can only be reached by vessel/boat instead of highways – typically Alaska and Hawaii. Our ocean carrier is equipped to handle any inland transportation moves needed to deliver your freight once it arrives at the local port.

Once Mincey Marble has produced the order and the material is ready for shipment, we will load a container, and our carrier will drive it to the local railyard to travel by train to the closest mainland port. Once the container is loaded onto the vessel, it will travel by sea to the port nearest to the project's location. You will then be notified that the container is available at port and set up the delivery through our carrier.

**All container deliveries require a 5,000 lb. capacity forklift with minimum 72" forks and a pallet jack to be onsite at the time of delivery to unload the crated material. All container shipments containing shower doors require an 8,000 lb. capacity forklift with minimum 72" forks.**
