

DESIGN FOR LONGEVITY

When it comes to commercial showers, nothing compares to cast marble.

Fiberglass may be cheaper upfront, but with high breakage rates and more opportunities for leakage, the costs can become exponentially more expensive. Cast marble not only looks better, but its durability ensures it looks new for years to come.

Mincey panels

Fiberglass surround

1 MAINTENANCE

Cast marble panels and pans require virtually no maintenance - **no grouting or sealing required**. They can also be cleaned with almost any cleaning agent. Fiberglass features a softer finish which harsher cleaners will ruin. And, professional restoration is often needed.

2 DESIGN

Cast marble offers what fiberglass can't - **unique designs and textures, along with realistic tile patterns**. Although both materials are groutless, Mincey panels feature the look and feel of real grout. They also extend to the ceiling for a luxurious look.

3 DURABILITY

Made from a combination of crushed stone and resin, our solid cast marble is **designed to stand up against wear and tear**, tenant after tenant. Fiberglass shower units feature hollow plastic bodies which have a higher risk of breakage.

MINCEY CAST MARBLE

- Made from solid cast marble
- Can use almost any cleaning agent
- Deep stains easily removed with acetone and soft bristle brush
- Realistic tile patterns
- Low breakage rate
- Color stays true
- Pans sit directly on substrate for a simple 'drop-in' installation

FIBERGLASS

- Hollow plastic bodies
- Harsher cleaners damage finish
- Professional restoration needed for deep stains
- Fake look
- Tendency to crack
- Color can yellow over time
- Pans require a mudbed, creating more opportunity for installation failure

BUILD YOUR SHOWER ON A BETTER FOUNDATION

Don't be tempted to buy the cheapest shower pan. Make the smart choice for your tenants.

CAST MARBLE PANS

FIBERGLASS PANS

Durability

- Made from solid cast marble for utmost durability and safety
- Consistency of concrete (~200 lbs)
- Long life span

- Hollow bodies
- Increased risk of cracking, seepage
- Endures more damage in construction
- Shorter life span

Maintenance

- Easy to clean thanks to gel coat surface
- No professional restoration needed for deep stains

- Features a softer finish which harsher cleaners will ruin
- Deep stains often require professional restoration - costing time and money.

Color

- Exact color match to panels
- Color stays true

- Will not match your panels
- Most fiberglass pans only come in white, which might differentiate from Mincey panels.
- Material can yellow over time

Installation

- Sits directly on substrate for simple installation

- Requires a mudbed, creating more opportunity for installation failure
