

## Small Shipment Delivery Information

Once Mincey Marble has completed your order and it is ready to ship, small-crate shipments will move via LTL freight with R&L Carriers. These shipments typically travel on a 53-foot dry van trailer and are transferred through multiple terminals before arriving at the jobsite.

R&L will contact you once the shipment reaches your local terminal to schedule a delivery appointment and confirm a delivery window. Liftgate service may be available, but it cannot be guaranteed in advance. Availability will be confirmed during the scheduling call.

If liftgate service is available, the driver will lower the crate(s) to ground level. Please note that relocation of the crate after it has been offloaded is your responsibility.

Proper equipment will be required to receive and move the shipment. A pallet jack and a 5,000 lb. capacity forklift will be necessary. Forks must be either 48" or 72" in length, and the required fork length will be confirmed at the time of shipment.
